Unconstrained and Constrained Calculations

- ✓ For the **even-even** nuclei, the unconstrained calculations are performed from initial deformations $\beta = -0.4, -0.2, 0.0, 0.2, 0.4, 0.6$.
- ✓ For all the nuclei, the constrained calculations are performed with $\beta = -0.6, -0.5, -0.4, -0.3, -0.2, -0.1, 0.0, 0.1, 0.2, 0.3, 0.4, 0.5, 0.6$.
- ✓ If necessary, additional unconstrained and constrained calculations are performed.

Outline

- Overall Progress
- Numerical details
- Results of $Z=122$
- Summary

➤ Numerical details

- Box size: $R_{\text{box}} = 20 \text{ fm}$
- Mesh size: $\Delta r = 0.1 \text{ fm}$
- Energy cutoff: $E_{\text{cut}} = 300 \text{ MeV}$
- Angular momentum cutoff: $J_{\text{max}} = 23/2 \hbar$
- Legendre expansion order: $\lambda_{\text{max}} = 10$ ($121 \leq Z \leq 136$)
- Relativistic density functional: PC-PK1
- Pairing strength: -325.0 MeV fm^3

Zhang, et al. (DRHBc Mass Table Collaboration), PRC 102, 024314 (2020)
58th Skype meeting of DRHBc mass table

Outline

- Overall Progress
- Numerical details
- Results of $Z=122$
- Summary

➤ Binding energy per nucleon

The largest B/A is the nucleus with $N=182$ ($A=304$)

➤ Fermi energy

$\lambda_p > 0$: $N = 178$ ($A = 300$),
 $N \leq 174$ ($A \leq 296$)

$\lambda_n > 0$: $322 \leq N \leq 334$
($444 \leq A \leq 456$)

➤ Separation energy

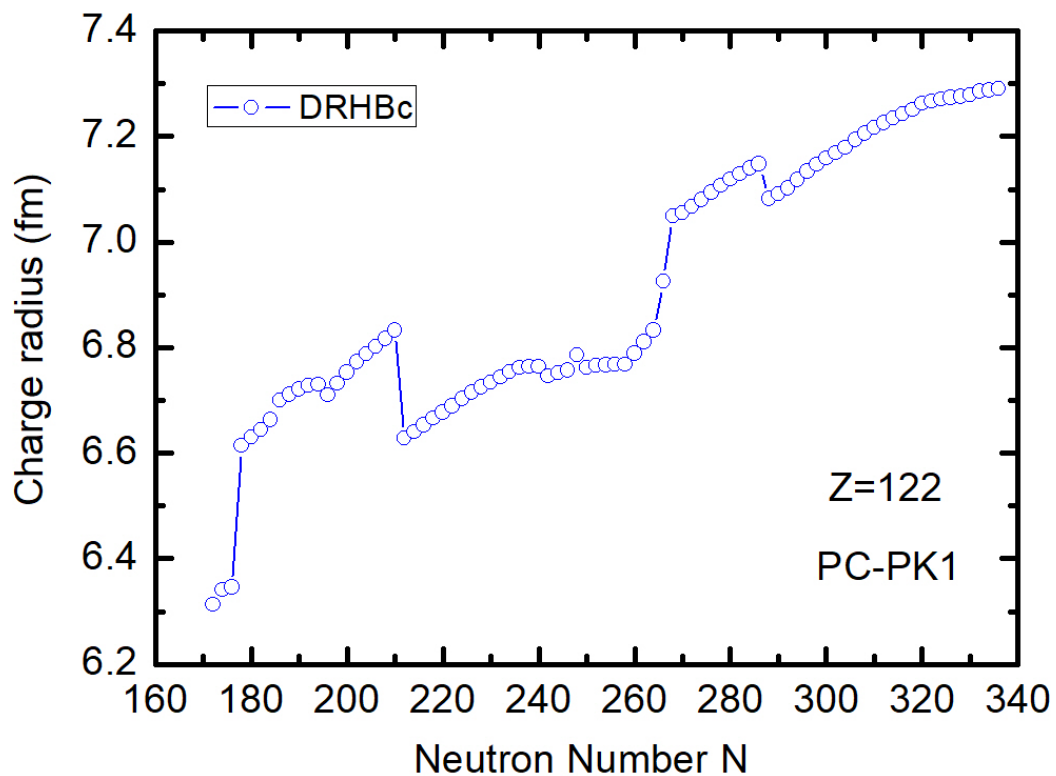

$$S_{2p} < 0: N \leq 176 (A \leq 298)$$

$$S_{2n} < 0: N \geq 320 (A \geq 442)$$

➤ Deformation

➤ Radius

➤ Pairing energy

Outline

- Overall Progress
- Numerical details
- Results of $Z=122$
- Summary

➤ Summary and Next step

- ✓ For the even-even nuclei of $Z=122$, both the constrained calculations and the unconstrained calculations have been finished.
- ✓ For the odd- A nuclei of $Z=122$, the constrained calculations have been finished about 33% with $N \leq 225$ ($A \leq 347$).
- ✓ Check the results of even-even nuclei.
- ✓ Finish the calculations for all odd- A nuclei by the end of this year.

Thank you !
